軟體品質保證與軟體測試作業二

題目:

寫一個判斷三角形的程式,必須用到 assert, exception, checkstyle, findbugs 等技巧程式碼:

```
public class Triangle {
   public static void main(String[] args) {
       double a = 3, b = 4, c = 5;
       try {
          checkTriangle(a, b, c);
       } catch (WrongTriangleException e) {
          e.printStackTrace();
     }
   static void checkTriangle(final double a, final double b,
final double c) throws WrongTriangleException {
          if (a <= 0 || b <= 0 || c <= 0) {
                throw new WrongTriangleException();
          else if (a + b < c || a + c < b || b + c < a) {
                throw new WrongTriangleException();
          else if (a * a + b * b == c * c || a * a + c * c == b *
b \mid | c * c + b * b == a * a) 
                System.out.println("直角三角形");
          else if (a == b && a == c) {
                System.out.println("正三角形");
          else if (a == b || a == c || b == c)
          {
                System.out.println("等腰三角形");
          else {
                System.out.println("三角形");
          }
   }
}
class WrongTriangleException extends Exception {
     WrongTriangleException(final String title) {
          super(title);
```

```
public WrongTriangleException() {
    super("Not a triangle!!!");
}
```

執行結果:

正常判斷

輸入異常

```
Problems @ Javadoc Declaration 全 Console 公
<terminated > Triangle [Java Application] C:\Program Files\Java\jre1.8.0_241\bin\javaw.exe (2020年3月24日下午11:34:52)

WrongTriangleException: Not a triangle!!!
at Triangle.checkTriangle(Triangle.java:17)
at Triangle.main(Triangle.java:7)
```

心得:

這次學到了很多好用的小工具,findbugs可以在程式寫完後直接去執行看看,能夠 找出很明顯的錯誤省的自己在挑錯誤的麻煩,checkstyle則是能夠培養出好的coding習 慣讓自己以後再看或是別人在看的時候能夠容易看懂一些,還有在和別人合作時如果 有統一的格式看起來也比較整齊。
